Abstract: Since the SUS (Unified Health System) is a care delivery model based on the principles of universality, integrity and equity, it is necessary to establish a humanized and efficient health system. For this, Integrative and Complementary Practices (PICs) have gained their place in the way of doing health worldwide. Therefore, this work aims to demonstrate the implementation of PICs in the Unified Health System and its impacts. This is a qualitative article, in the experience report model, using the Medline, Scielo, Pubmed and Periodico Capes databases. In addition, it used as inclusion criteria work published in the last ten years, in English or Portuguese.

Keywords: SUS; PICs; Humanization

INTRODUCTION

The Unified Health System (SUS) is characterized by serving individuals of all economic, educational and social levels, and this model of care can be used in any of the spheres, such as health surveillance, the use of vaccines in primary care., basic sanitation, among other services. Therefore, it is necessary to implement public policies that establish efficient and humanized care,

in this sense, Integrative and Complementary Practices (PICs), since the 1990s, have gained space in global health and consequently in Brazil. (Frass, 2012).

PICs are intended to mitigate the high rate of drug use, making health care closer to the traditional care model used in antiquity, in some historical references, such as traditional Chinese and French medicine.

Therefore, this work has as main objective to demonstrate the implementation of Integrative and Complementary Practices in the Unified Health System and its impact on the way of providing care for the Brazilian population.

METHODOLOGY

RESULT

The Ministry of Health (MS) released the National Policy on Integrative and Complementary Practices (PNPIC) in the SUS, regulated by Ordinance No. 971/2006, with the aim of improving the integrality guideline in the health service. the population, non-pharmacological care practices, being used mainly in health promotion, mitigating potential harm.
